It consists of seat, backrest, central metal supporting frame (leg) and armrests.

The seat tilts automatically to provide more free space.

It can be installed in straight or curved lines.

Seat and backrest are designed to be suitable for long-term use.

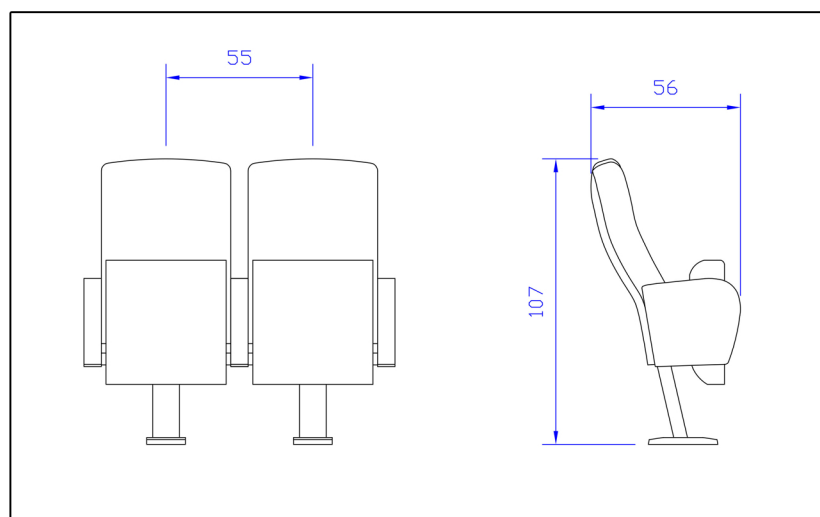

The frame is made of steel with a central leg and foot with four holes for ground fixation.

All metal parts are painted with epoxy powder.

The chair is upholstered with high quality, flame retardant fabrics.

Chair is certificated for strength according to EN 12727 level 4 standard with addition certification for seats 500.000 workd cycles.

It is also certificated for flammability according to EN 1021-1 & EN 1021-2 standards.
