

The NIKI series includes seating with a polypropylene seat and backrest, and a steel frame.

They are designed for sports venues and stadiums.

The series combines quality materials, high comfort, and functionality in an aesthetically harmonious product. Simple, essential lines deliver the perfect combination of comfort and durability.

NIKI series Technical Characteristics

General:

It is a seat with a tip-up (folding) base suitable for outdoor installation. It consists of a seat, a backrest, and the frame. The seat is easily disassembled to allow its parts to be replaced. Installation is done on the grandstand riser (riser-mounted).

Backrest & Seat:

They are manufactured from copolymer polypropylene. The rotation of the seat is gravity-driven, operating via a counterweight.

Frame:

The frame is made of steel and consists of specially shaped side brackets that are anchored directly to the riser.

Certificates:

BIRO is ISO 9001, ISO 14001 and ISO 45001 certificated.

Technical drawings of the 1000 Series car seat, showing four views with dimensions in millimeters:

- Side View (Top Left):** Shows the side profile of the seat. Dimensions include a height of 560 mm, a width of 366 mm, a total width of 512 mm, and a depth of 392 mm.
- Rear View (Top Right):** Shows the rear of the seat. Dimensions include a width of 460 mm, a height of 49 mm, and a total width of 558 mm.
- Front View (Bottom Left):** Shows the front of the seat. The total width is 512 mm.
- Side Profile View (Bottom Right):** Shows the side profile of the seat from a different angle. The width is 256 mm.
